Third Gear

Before playing:
Nothing special is needed to run the game, only having the Live Server active.

How to play:
Use the mouse to pick a difficulty level in the Initial Menu. Type the player name wished (only typing is needed). After doing both those actions, press the Start button with the mouse. Then, 4 cars will be shown. Pick one to play with using the mouse. After that, the player chosen car cannot be picked for the opponent. Pick a car to be used by the oponente using the mouse. The race will start. The main commands are (always in lowercase):

Key c – switch camera angle;
Key w – move forward;
Key s – move backwards;
Key d – move to the right;
Key a – move to the left;
Key p – pause the game;
Key r – go to the last checked checkpoint;
Key Esc – go to the initial menu;

In the final menu, two buttons can be picked using the mouse. The Menu button will take the player to the initial menu, allowing them to change the game's settings. The Replay buttons will restart the game with the exact same settings.

When going against a powerup, an obstacle must then be picked. To pick an obstacle, use the mouse. Then, use the keys WASD to position it, and drop it using Space.

If the green car most to the right hand side is picked, when pressing the letter l (lowercase L), the front lights will pop up. If pressing h, one of the popup lights will go even more up.
